# quick recap of assignment 1

1. Required a Data Adapter to read & process schema-on-read (SoR) files
2. Infer data type schema from sample of given file content
3. Files too large to fit into RAM, must be able to read part of the file
4. Store processed data in “columnar” format
5. Ability for user to interact (check data types, values) via the command line

# high level architecture
